

## EDpuzzle Student Data

Using EDpuzzle is not only engaging for students, but also beneficial for teachers in tracking their students' EDpuzzle data, whether it be whole class progress or individual student progress. Such data provides indicators regarding which students have participated in the lessons, the duration of each student's session, as well as any repetition of sections viewed. Additionally, all objective responses from students are graded and stored in your EDpuzzle classes, allowing for formative assessment opportunities to drive your instruction. You also have the capability to provide comments and feedback to students for those subjective responses. Student data can also be downloaded as a .csv file for later documentation or easy reference.

We want to hear from you regarding future Tech Tidbit topics. Please complete this [short survey](#) so we can better meet your instructional technology needs.
